-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Objections***

1. Claim 1 is objected to because of the following informalities: In line 2, "carrier" is misspelled. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Deblasi et al. 6,036,945.

4. Deblasi et al. disclose a delivery system for at least one sunscreen active comprising a solvent and a wax, which is heated to 150 degree C and then cooled rapidly while stirring (claim 27). The solvent can be jojoba oil or linseed oil (claim 30). The recrystallization of the wax takes place between 25 and 50 degree C and the particle size of the wax particles is between one to eight microns (column 3, lines 42-60). The concentration of the wax is 10-40% by weight and the solvent concentration is 20-89% by weight (column 7, lines 30-34). While the reference does not cite the viscosity of the composition, since the ingredients and the concentrations are similar, the rheology is expected to be similar too. As far as the rise in temperature during the mixture is concerned, that is inherent in the process. It would have been obvious to one

having ordinary skill in the art, at the time the invention was made, to select jojoba oil or linseed oil from a list of equivalents.
